Objective
Each team will create a design for their e-commerce site.

Activity
• Create several scenarios that capture the most important interactions with your site. Be sure to include:
  o joining the service
  o searching for tutoring
  o resolving disputes
  You may also want to consider incentives, reputation mechanisms, and dynamic pricing.

• Identify content and functions of the site and create a content inventory and functional requirements. Don’t ignore issues such as reputation management, and the work to be done by employees of the organization.

• Design the site structure by showing all of the pages in the site and their relationships. Visio 2000 (available in the labs) has some tools for this, but hand-drawn structures are perfectly acceptable.

Submission
Turn four copies of your entire design document at class time on 9/20.
